Academic scheduling is a complex task for department chairs in universities. This presentation introduces MSUClassIC (Midwestern State University Class Inventory Catalog), a web application designed to assist department chairs in optimizing semester schedules. The application allows chairs to upload previous semester schedules and offers various pivot table-like views for analysis. Through intuitive drag-and-drop functionality, department chairs can adjust course schedules, significantly reducing a once time-intensive and tedious task. This talk will explore the features and functionalities of MSUClassIC, demonstrating its potential to improve academic scheduling processes at Midwestern State University.
